

SAS[®] to Excel:

Give Them the Report

Exactly the Way That They Want It

LeRoy Bessler PhD

Bessler Consulting and Research

Le_Roy_Bessler@wi.rr.com

What is the commonest fate
of SAS-prepared data?

Notice

SAS is a registered trademark or trademark of SAS Institute Inc. in the USA and other countries. ® indicates USA registration. Other product and brand names are trademarks or registered trademarks of their respective owners.

A Popular Solution around the World?

Nearly every week, I get a request from somewhere around the world for my free DDE toolkit of macros, sample programs, & supporting files.

You can request it via email.

What Can You Do with DDE?

- Anything you can do with keyboard & mouse
- Here I cover only a subset of the input/output & formatting capabilities
- When DDE cannot do it (rare), pre-record an Excel macro & run it with DDE

What You Can Do without DDE:
See my MWSUG 2010 paper
“SAS and Excel,
A Winning Combination, Part 1”

Scope of Presentation

- As much as time permits
- 53-page paper covers everything

If you use SAS on a Server, not on your desktop or laptop PC

- Feasible (I have done it), but . . .

Important Cautions Apply

- See Appendix 1 in the paper for details.
- In 2009, I published a non-DDE tool to handle the situations that can arise. See Appendix 1 for the reference.

If you use SAS
on your desktop or laptop PC,
you can have
a very cool experience:
In one window, watch SAS log
In other window, watch Excel

Presentation Content & Style

- Much code
- Spreadsheet Results, step by step
- Numerous slides, plus more, if time permits
- Very little here on read/write to/from Excel
(well covered by other authors, and
in SAS Companion to Windows)

Companion Material

- Paper
- **Available via email:** more programs than can be covered here, PLUS 60 macros, plus a SAS user solution for cell merge
- Programs substantially commented

Presentation Plan

- In-depth “How It Works”
- Basic Examples: usable for any application

As/If Time Permits

- Special Applications

DDE: Dynamic Data Exchange

- Your SAS session is a client
- It opens Excel which acts as a server

Your SAS Program:

1. Starts/Executes Excel
2. Establishes channel to talk to Excel
3. Opens new/existing XLS file (workbook)
4. Sends commands to Excel
5. Saves, or Saves As (new/diff), XLS file
6. Exits/Stops Excel

Formatting the Cells

- Font controls:

font, style, size, **color***, underline

- **Color the background***

***Colored text harder to read**

than black on white:

extreme example Example at left occurred!

Beware of effect of

text color / background color combinations

on readability

More Formatting for the Cells

- Cell sizing, including:
 - column or row AutoFit
 - column or row Hide/Unhide
- Alignment / Wrap
- Borders (e.g., section the worksheet)
- Indent content (two tricks shown with sample programs/macros)

Worksheet Controls

- Select worksheet, cells, rows, columns
- Freeze/Unfreeze Panes
- Turn AutoFilter On/Off
- Generate subtotals in Worksheet
- Control/Change levels for Excel subtotals
- Or use multiple sheets for levels of totals
- Activate specific worksheet in workbook
- Create additional worksheets in workbook
- Delete unused worksheets in workbook

Other Manipulation

- Insert/Delete columns or rows
- Find
- Find and Replace cell contents
- Copy cells
- Move cells
- Use formulas to create new column(s)

Miscellaneous

- Zoom –
to shrink (or enlarge) worksheet
- Message –
but might get overlooked by viewer

Our First Example . . .

- demonstrate concept
- actual use improbable
- chosen for its simplicity to do & show results

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O

Channel for DDE Commands

- Special SAS filename statement
- `filename YourFileRef dde "excel|system";`
- `YourFileRef` is arbitrary 1-to-8 characters
- I like `DDEcmds`
- but can be anything

The DDE triplet for Excel

Identifies current selection for read or write:

`EXCEL|YourSheet!RppppppCqqq:RsssssCttt`

ppppp is 1-to-5-digit start/top row number

qqq is 1-to-3-digit start/left column number

sssss is end/bottom row number

ttt is end/right column number

row/column numbers with leading zeros OK

DDE doublets & singlets

Identify current selection for other XL action:

RppppppCqqq:RsssssCttt **rectangle of cells**

RppppppCqqq **single cell**

Rppppp:Rsssss **range of rows**

Rppppp **single row**

Cqqq:Cttt **range of columns**

Cqqq **single column**

Coding the DDE Triplet, etc.

EXCEL|YourSheet!RppppppCqqq:RsssssCttt

- Not required to code it by hand
- When needed, **Software Intelligence (SI)** in your **program can dynamically determine** number of rows or ending row required, etc.

Coding DDE Triplets, etc.

EXCEL|YourSheet!RppppppCqqq:RsssssCttt

Can Be:

- Explicitly coded
- SAS-macro-generated
- Software-Intelligence generated

SAS-to-Excel DDE Commands

- Originally Developed by Microsoft for earlier editions(s) of Excel
- I have used them with various versions of Windows and Excel (including 2007)
- They work for me, but **NO GUARANTEES**

SAS-to-Excel DDE Commands

- Documented in Macrofun.hlp
- Download it from Microsoft:
Use Google to search for Macrofun.hlp
- Macrofun = “Macro Functions” (but can be fun)
- Functions do **not** require
use of custom Excel macros created by you

SAS-to-Excel DDE Commands

Caveats:

- Not every command works (e.g., rename worksheets, create subtotals, . . .)
- Some command *options* may not work
- **What *does* work is an enormous tool set!**

true / false values for DDE cmds

To turn options On / Off
via DDE command parameter assignment,
use true / false

But for some commands,
use 1 / 0 instead

DDE Command Format

```
put '[CommandName(arg1,arg2,...,argN)];
```

- CommandName
may be multi-word, dot-separated
- To indicate omission of arguments—
 - if at start of list: ,arg2,arg3, ...
 - if in middle of list: arg1,,arg3, ...
 - if at end of list: arg1,arg2 (just omit it)

The DDE Framework

- Start Excel
(provides default empty workbook, 3 sheets)
- Optionally, open an existing workbook
- Application processing
- Save / Save As of current workbook
- Exit Excel

Starting Excel from SAS

For other versions of MS Office or Excel, the folder sequence below may differ:

```
X "C:\Program Files\Microsoft Office\Office\EXCEL.exe";  
data _null_;  
z=sleep(3); /* wait 3 seconds for Excel to start */  
run;
```

Opens a new workbook,
with three empty worksheets:
Sheet1, Sheet2, Sheet3

Open Existing Workbook from SAS

```
data _null_; /* talk to DDE, no output data */  
file DDEcmds;  
put '[open(  
    "c:\YourFolder\YourWorkbook.xls")]';  
z=sleep(3); /* wait 3 seconds for it to open */  
run;        /* it is important to wait before  
            sending next DDE command */
```

Finished Workbook Save As

```
data _null_;  
file DDEcmds;  
put '[error(false)]';  
put '[save.as  
      ("c:\OtherFolder\DifferentFileName.xls")]';  
z=sleep(1);  
run;
```

error(false) command tells Excel that you do not want any prompts to confirm intention

Exiting Excel from SAS

```
data _null_;  
file DDEcmds;  
put '[error(false)'];  
put '[quit()]'; /* empty parenthesis */  
run;
```

`error(false)` command tells Excel that you do not want any prompts to confirm intention

doing it all with macros is easier

```
%XLStart;
```

```
%XLDDEcmdsFileName;
```

```
%XLOpen(WorkBook=  
    c:\YourFolder\YourWorkbook.xls);
```

```
%XLSaveAs(WorkBook=  
    c:\OtherFolder\DifferentFileName.xls);
```

```
%XLExit;
```

- Details out of scope of presentation
- Macros & sample programs available by email

Fonts & Colors for Data in Cells

WorkSheet with Default Format

The screenshot displays the Microsoft Excel interface with a worksheet titled 'TempClass'. The worksheet contains a table with 20 rows of student data. The columns are labeled 'Name', 'Sex', 'Age', 'Height', and 'Weight'. The data is as follows:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Name	Sex	Age	Height	Weight										
2	Alfred	M	14	69	112.5										
3	Alice	F	13	56.5	84										
4	Barbara	F	13	65.3	98										
5	Carol	F	14	62.8	102.5										
6	Henry	M	14	63.5	102.5										
7	James	M	12	57.3	83										
8	Jane	F	12	59.8	84.5										
9	Janet	F	15	62.5	112.5										
10	Jeffrey	M	13	62.5	84										
11	John	M	12	59	99.5										
12	Joyce	F	11	51.3	50.5										
13	Judy	F	14	64.3	90										
14	Louise	F	12	56.3	77										
15	Mary	F	15	66.5	112										
16	Philip	M	16	72	150										
17	Robert	M	12	64.8	128										
18	Ronald	M	15	67	133										
19	Thomas	M	11	57.5	85										
20	William	M	15	66.5	112

30															
31															
32															
33															
34															
35															

The Excel window title is 'Microsoft Excel - TempClass'. The menu bar includes File, Edit, View, Insert, Format, Tools, Data, Window, and Help. The toolbar shows various icons for file operations and formatting. The status bar at the bottom indicates 'Ready' and shows the taskbar with other open applications: Microsoft PowerPoint - [Be...], SAS - [MiscellaneousFunct...], and Microsoft Excel - Tem... The system clock shows 4:29 AM.

Font Formatting – Step 1

- Activate worksheet (if not already there)
Not really necessary—
this workbook has only one worksheet
- Select the cells to be formatted

```
data _null_;
```

```
file DDEcmds;
```

```
put '[workbook.activate("CLASS")]';
```

```
put '[select("R5C3:R7C5")]';
```

```
run;
```

Select Cells To Be Formatted

The screenshot shows a Microsoft Excel window titled "TempClass" with a menu bar (File, Edit, View, Insert, Format, Tools, Data, Window, Help) and a toolbar. The active cell is C5, containing the value 14. The spreadsheet contains the following data:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Name	Sex	Age	Height	Weight										
2	Alfred	M	14	69	112.5										
3	Alice	F	13	56.5	84										
4	Barbara	F	13	65.3	98										
5	Carol	F	14	62.8	102.5										
6	Henry	M	14	63.5	102.5										
7	James	M	12	57.3	83										
8	Jane	F	12	59.8	84.5										
9	Janet	F	15	62.5	112.5										
10	Jeffrey	M	13	62.5	84										
11	John	M	12	59	99.5										
12	Joyce	F	11	51.3	50.5										
13	Judy	F	14	64.3	90										
14	Louise	F	12	56.3	77										
15	Mary	F	15	66.5	112										
16	Philip	M	16	72	150										
17	Robert	M	12	64.8	128										
18	Ronald	M	15	67	133

24															
25															
26															
27															
28															
29															
30															
31															
32															
33															
34															
35															

The status bar at the bottom shows "Ready" and "Sum=511.6". The taskbar at the very bottom includes the Start button and several open applications: Microsoft PowerPoint, Untitled - Notepad, SAS - [FontControl], Microsoft Excel - T..., and a clock showing 9:14 AM.

Font Formatting – Step 2

We want:

font **Verdana**

style **Bold**

size **16** point

(Excel) color **3**

data _null_;

file DDEcmds;

```
put '[font.properties("Verdana","Bold",16,,,,,,,,3)]';
```

```
run;
```

Font Changed, but Obscured

The screenshot shows a Microsoft Excel window titled "TempClass" with a menu bar (File, Edit, View, Insert, Format, Tools, Data, Window, Help) and a toolbar. The active cell is C5, containing the value 14. The spreadsheet contains a table with the following data:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Name	Sex	Age	Height	Weight

34															

The cells containing the values 14, 62.8, 102.5, 14, 63.5, 102.5, and 12, 57.3, 83 are highlighted with a blue background and a red border. The font of these cells is Times New Roman, 16, bold, italic, and underlined. The status bar at the bottom shows "Ready" and "Sum=511.6". The taskbar at the bottom shows the Start button and several open applications: Microsoft PowerPoint, Untitled - Notepad, SAS - [FontControl], Microsoft Excel - T..., and a clock showing 9:16 AM.

Font Formatting – Step 3 for Demo

After block of cells formatted,
predecessor `select("R5C3:R7C5")` command
leaves them highlighted.

But I want to see new color.

Move the focus:

```
data _null_;
```

```
file DDEcmds;
```

```
put '[select("R1C1")]';
```

```
run;
```

"I can see clearly now."

The status bar at the bottom of the Excel window shows "Ready" and "NUM". The Windows taskbar at the bottom shows the Start button and several open applications: Microsoft PowerPoint, SAS, Microsoft Excel, and Notepad. The system clock shows 1:09 PM.

Using Formulas in Excel

Using Formulas in Excel

- Normally,
could create data in SAS pre-load process
- **Suppose, however, we want
columns derived from Excel subtotals**
- For demo only,
working with simple spreadsheet content,
without subtotals
- With subtotals present,
use of Excel formulas works the same

Get New Column Left of Column 4

```
data _null_;
```

```
file DDEcmds;
```

```
put '[select("C4")]';
```

```
put '[insert(4)]'; /* 4 specifies type of INSERT */
```

```
run;
```

- Remaining Slides Not In the Paper
- Code Used Available Via Email

Excel Subtotals

Two Solutions

1. Separate Custom Worksheets for each level
2. DDE use* of Excel's subtotals

*Requires a pre-built Excel macro for one step

Excel Subtotals Solution 1

Separate Custom Worksheets For Each Level

Alternative to Excel Subtotals

Another Way to Do Subtotals

- Custom Design: **Really** “Have It Your Way”
- Prepare multiple pre-formatted empty WorkSheets
- Load them via DDE
- May have to use Software Intelligence for post-load formatting
- User moves from “level” to “level” via Tab Navigation, not Excel “Level Buttons”
- Here showing only results, not code

Overview WorkSheet

The screenshot shows a Microsoft Excel window titled "Microsoft Excel - MultipleViewsOfsasHelp_Class". The worksheet contains a table with the following data:

Sex	Height	Weight
F Total	545.3	811.0
M Total	639.1	1089.5
Grand Total	1184.4	1900.5

The Excel interface includes a menu bar (File, Edit, View, Insert, Format, Tools, Data, Window, Help), a toolbar with various icons, and a status bar at the bottom showing "Ready". The taskbar at the bottom displays the Start button, several application icons, and the system tray with the time 7:35 PM.

Only Excel Macros Here

Open Macro for Demo Only

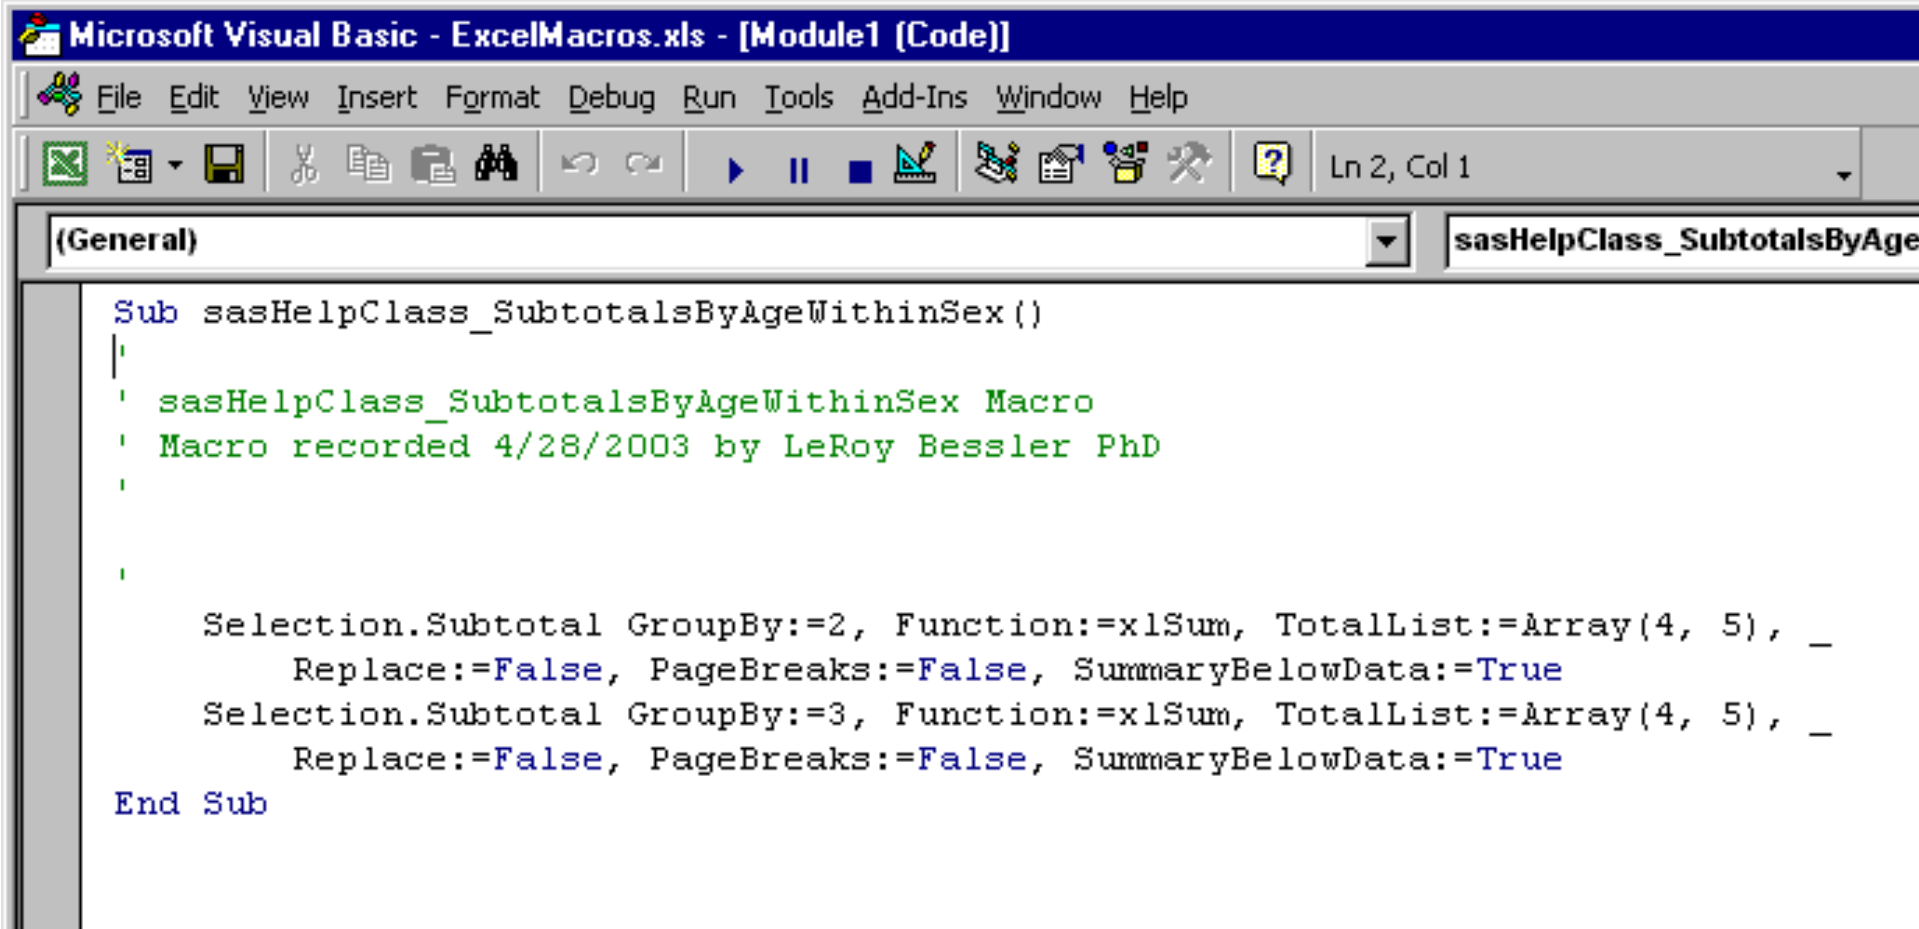

The screenshot shows the Microsoft Visual Basic Editor window for 'ExcelMacros.xls - [Module1 (Code)]'. The window title bar includes standard window controls and a menu bar with 'File', 'Edit', 'View', 'Insert', 'Format', 'Debug', 'Run', 'Tools', 'Add-Ins', 'Window', and 'Help'. Below the menu bar is a toolbar with icons for file operations and execution. The status bar at the top right indicates 'Ln 2, Col 1'. The main area is a code editor with a dropdown menu set to '(General)' and a list box showing 'sasHelpClass_SubtotalsByAgeWithinSex'. The code is as follows:

```
Sub sasHelpClass_SubtotalsByAgeWithinSex()  
|  
|   sasHelpClass_SubtotalsByAgeWithinSex Macro  
|   Macro recorded 4/28/2003 by LeRoy Bessler PhD  
|  
|  
|  
|   Selection.Subtotal GroupBy:=2, Function:=xlSum, TotalList:=Array(4, 5), _  
|       Replace:=False, PageBreaks:=False, SummaryBelowData:=True  
|   Selection.Subtotal GroupBy:=3, Function:=xlSum, TotalList:=Array(4, 5), _  
|       Replace:=False, PageBreaks:=False, SummaryBelowData:=True  
End Sub
```

The Windows taskbar at the bottom shows the Start button and several open applications: Microsoft PowerPoint, SAS (Log - [Untitled]), Microsoft Excel, and Microsoft Visual Basic. The system clock in the bottom right corner displays '7:08 PM'.

Open Macro for Demo Only

The image shows a screenshot of the Microsoft Visual Basic Editor window. The title bar reads "Microsoft Visual Basic - ExcelMacros.xls - [Module1 (Code)]". The menu bar includes File, Edit, View, Insert, Format, Debug, Run, Tools, Add-Ins, Window, and Help. The toolbar contains various icons for editing and execution. The status bar at the bottom right shows "Ln 2, Col 1". The main code window is titled "(General)" and contains the following VBA code:

```
Sub sasHelpClass_SubtotalsByAgeWithinSex()  
|  
| sasHelpClass_SubtotalsByAgeWithinSex Macro  
| Macro recorded 4/28/2003 by LeRoy Bessler PhD  
|  
|  
|  
| Selection.Subtotal GroupBy:=2, Function:=xlSum, TotalList:=Array(4, 5), _  
| Replace:=False, PageBreaks:=False, SummaryBelowData:=True  
| Selection.Subtotal GroupBy:=3, Function:=xlSum, TotalList:=Array(4, 5), _  
| Replace:=False, PageBreaks:=False, SummaryBelowData:=True  
End Sub
```

Open Data Workbook, Run the Subtotals Excel Macro

```
data _null_;
```

```
file DDEcmds;
```

```
put '[open("C:\Folder\TempClass.xls")]';
```

```
x=sleep(3);
```

```
put '[run("ExcelMacros.xls!DoSubtotals",false)]';
```

```
run;
```

Ready

Start Microsoft PowerP... Untitled - Notepad SAS - [ExcelSubt... ExcelMacros sasHelpClass... 7:37 AM

Controlling Subtotal Display

Show Subtotals Only to Level 3

```
data _null_;  
file DDEcmds;  
put '[show.levels(3,0)]';  
run;
```

Excel Subtotals, Showing to Level 3

The screenshot displays a Microsoft Excel window titled "sasHelpClassWithSubtotals". The spreadsheet contains the following data:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	Name	Sex	Age	Height	Weight									
3			11 Total	51.3	50.5									
6			12 Total	116.1	161.5									
9			13 Total	121.8	182									
12			14 Total	127.1	192.5									
15			15 Total	129	224.5									
16		All Females		545.3	811									
18			11 Total	57.5	85									
22			12 Total	181.1	310.5									
24			13 Total	62.5	84									
27			14 Total	132.5	215									
30			15 Total	133.5	245									
32			16 Total	72	150									
33		All Males		639.1	1089.5									
34		Grand Total		1184.4	1900.5									

The taskbar at the bottom shows the Start button, several application icons, and the following open windows: "Microsoft PowerPoint - [Be...", "Microsoft Excel - sas...", and "Microsoft Excel - sasHelpClassWithSubtotals". The system clock indicates 6:50 PM.

Excel Subtotals, Showing to Level 2

The screenshot shows a Microsoft Excel window titled "Microsoft Excel - sasHelpClassWithSubtotals". The spreadsheet contains the following data:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	Name	Sex	Age	Height	Weight									
16		All Females		545.3	811									
33		All Males		639.1	1089.5
